[https://developers.arcgis.com/layers/] flashes content then produces a blank white screen

Device: Windows 10 PC

Account used: dpurdham@flemingcollege.ca
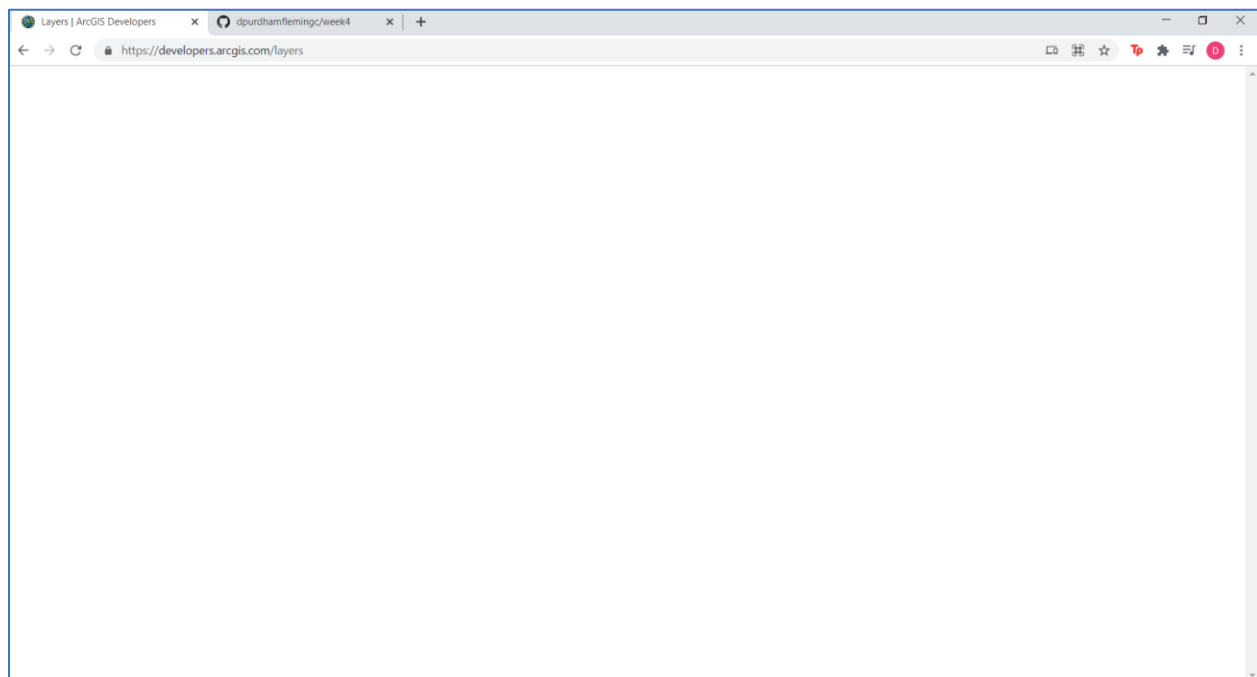

Connection type: Wifi

Reproducibility rate: Every time

Steps to reproduce:

1. Go to https://developers.arcgis.com/layers
2. Sign in if directed to

The expected result is for the page to load and for the user to view their layers.

The actual result is the site making the page visible for an instant then the page goes white with no ability to interact with it. The resulting screen is captured in the screenshot below.

The page not loading is a medium priority as your layers can be accessed in ArcGIS Online but it is still necessary for my purpose of creating a new hosted layer.
